

INTRODUCTION

The IMAC Cable Manipulator Truck is designed for fast and easy laying and recovery of cable for shovels and drillers in open pit mines.

Simultaneously the cable laying arm, located on the rear end of the coiler head extends the electrical cable and places it directly upon the road shoulder. The coiler head is able to turn 90° to the left right, and in this fashion place the cable directly upon the road shoulder.

CHARACTERISTICS

- ◆ Simultaneously transports 2 (two) drums of 450 mts capacity each.
- ◆ Stand-alone/self-sufficient cable manipulating unit.
- ◆ Easy access to ramp and different operating points.
- ◆ High transfer specks.
- ◆ Safe transfer of spools (quick open and close).
- ◆ Stand-Alone/Selft-Loading drum crane and cable steerer/director.

BENEFITS

- ◆ Significantly decreases time spent laying and recovering cable, thereby allowing shovels and drillers to be quickly incorporated into the productive process. Thus improving efficiency and productivity.
